# Ready or not

# here it comes!

*Simple changes can make a big difference to the comfort and affordability of your home. Why not try our top tips for keeping on top of your bills this winter?*

## Prepare your home for the cold weather

Keep the heat in and the cold out – make sure your home is well insulated and check for draughts around doors and windows

Using low energy lighting inside and outside costs 90% less than standard lightbulbs, which is very important with the shorter days

Heat your living spaces to at least 18 degrees and try and keep an even temperature throughout your home

Program your heating to switch on half an hour before you need it, and off half an hour before bed

Check your boiler is working properly now, before the temperature drops and you really need it

Stop overpaying for your energy – switch supplier for a better deal
